NORTHWEST OHIO + LAKE ERIE

Seasonal exterior-care checklist

A practical walk-around for homeowners - no ladder or roof climbing required.

THE QUICK RULE
LOOK. NOTE. PHOTOGRAPH.

SPRING 01

- [ ] Walk the property after winter and note siding, roof, gutter, concrete, deck, and fence buildup.
- [ ] Check gutters and downspouts from the ground for visible overflow, debris, or drainage problems.
- [ ] Photograph stained, shaded, or hard-to-reach areas so you can compare them later or request an estimate.
- [ ] Look at patios, walks, and driveways for dark buildup, organic growth, and areas that stay damp.

SUMMER 02

- [ ] Check shaded sides of the house, decks, fences, and outdoor living areas where growth can return quickly.
- [ ] Look over windows, trim, gutters, and high exterior details that are easy to miss from up close.
- [ ] Before gatherings or busy lake weekends, note the high-visibility areas you most want cleaned.

FALL 03

- [ ] After leaves drop, check gutter flow and downspout discharge from the ground.
- [ ] Note roof streaks, siding buildup, and slippery-looking hard surfaces before winter weather arrives.
- [ ] Photograph anything you want addressed in spring so the details are not forgotten over winter.

WINTER / OFF-SEASON 04

- [ ] Avoid climbing onto icy roofs or unsafe ladders. Use ground-level observation whenever possible.
- [ ] Plan spring work early if you already know you want the house, concrete, roof, deck, or windows cleaned.
- [ ] Keep a short photo folder of problem areas so an estimate can start with useful context.

WHEN YOU WANT AN ESTIMATE

Three photos make estimating easier.

Take one wide photo of each area, one closer photo of the buildup or stain, and one photo showing access. Add the property address and what you want cleaned.
